

一、工程结构介绍

1、工程结构

2、模块说明

yygh_parent: 预约挂号根目录（父工程），管理多个子模块：

common: 公共模块父节点

common_util: 工具类模块，所有模块都可以依赖于它

service_utils: service服务的base包，包含service服务的公共配置类，所有service模块依赖于它

rabbit_utils: rabbitmq封装工具类

hospital-manage: 医院模拟系统

model: 实体类相关模块

service: api接口服务父节点

service_hosp: 医院api接口服务

service_cmn: 公共api接口服务

service_user: 用户api接口服务

service_order: 订单api接口服务

service_oss: 文件api接口服务

service_msm: 短信 api接口服务

service_task: 定时任务服务

service_statistics: 统计api接口服务

service-client: feign服务调用父节点

service-cmn-client: 公共api接口

service-hosp-client: 医院api接口

service-order-client: 订单api接口

server-gateway: 服务网关

二、创建父工程

1、创建springboot工程yygh_parent

在idea开发工具中，使用 **Spring Initializr** 快速初始化一个 **Spring Boot** 模块，版本使用：**2.2.1.RELEASE**

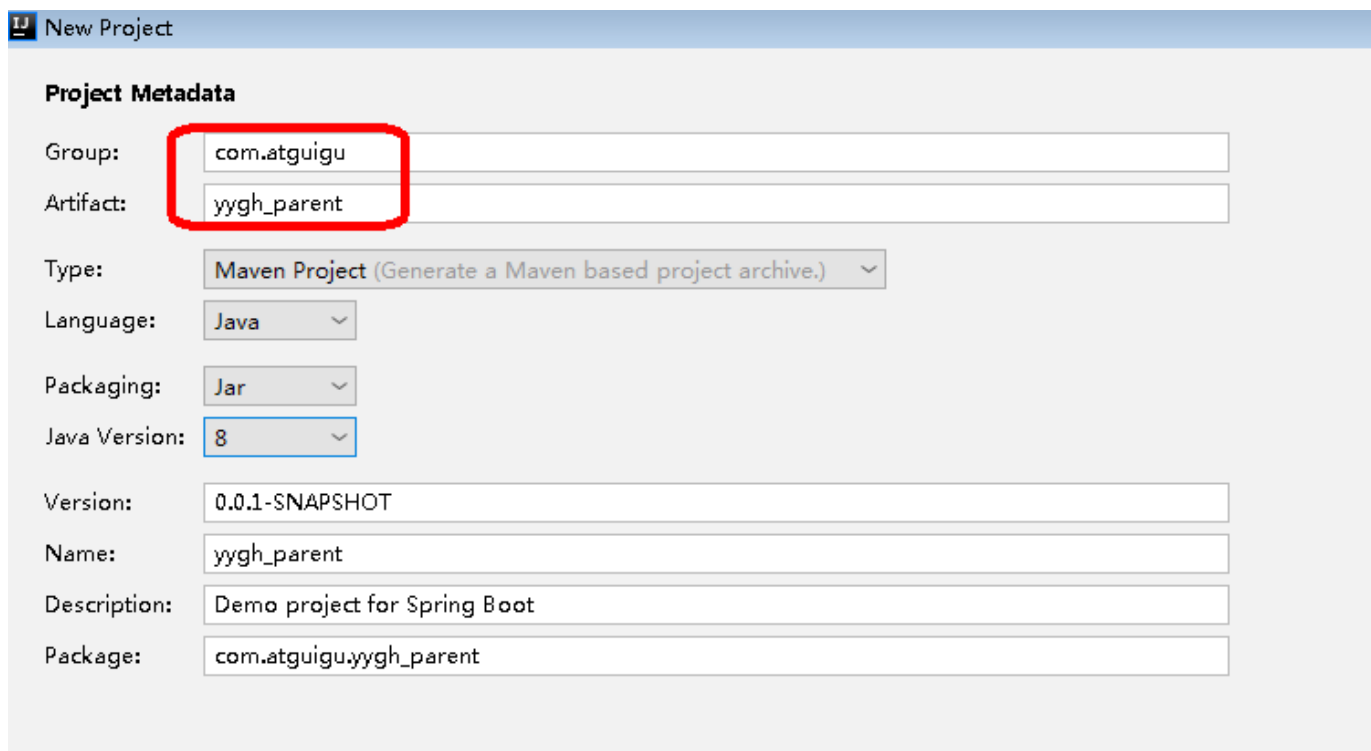

配置：

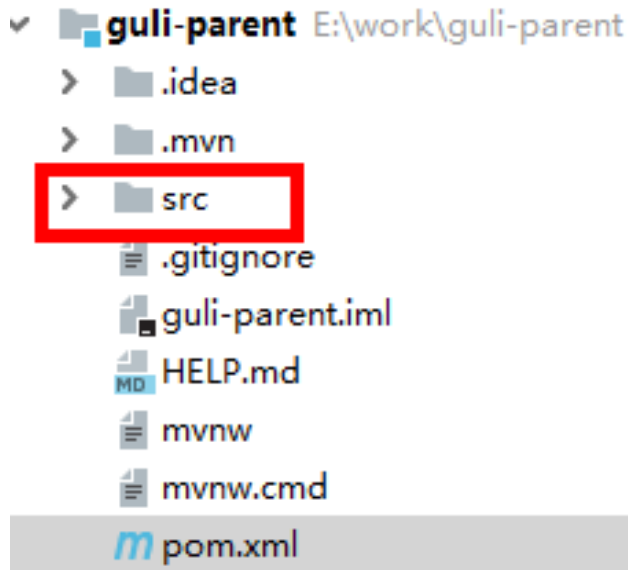

groupId: com.atguigu

artifactId: yygh_parent

一直下一步到完成

2、删除 src 目录

3、配置 pom.xml

修改版本为：2.2.1.RELEASE

```
<parent>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-starter-parent</artifactId>
  <version>2.2.1.RELEASE</version>
  <relativePath/> <!-- lookup parent from repository -->
</parent>
```

<artifactId> 节点后面添加 pom类型

```
1 <artifactId>guli-parent</artifactId>
2 <packaging>pom</packaging>
```

4、在pom.xml中添加依赖的版本

删除pom.xml中的<dependencies>内容

```
1 <!-- 以下内容删除 -->
2 <dependencies>
3     <dependency>
4         <groupId>org.springframework.boot</groupId>
5         <artifactId>spring-boot-starter</artifactId>
6     </dependency>
7
8     <dependency>
9         <groupId>org.springframework.boot</groupId>
10        <artifactId>spring-boot-starter-test</artifactId>
11        <scope>test</scope>
12    </dependency>
13 </dependencies>
```

添加 <properties> 确定依赖的版本

```
1 <properties>
2     <java.version>1.8</java.version>
3     <cloud.version>Hoxton.RELEASE</cloud.version>
4     <alibaba.version>2.2.0.RELEASE</alibaba.version>
5     <mybatis-plus.version>3.3.1</mybatis-plus.version>
6     <mysql.version>5.1.46</mysql.version>
7     <swagger.version>2.7.0</swagger.version>
8     <jwt.version>0.7.0</jwt.version>
9     <fastjson.version>1.2.29</fastjson.version>
10    <httpclient.version>4.5.1</httpclient.version>
11    <easyexcel.version>2.2.0-beta2</easyexcel.version>
12    <aliyun.version>4.1.1</aliyun.version>
13    <oss.version>3.9.1</oss.version>
14    <jodatime.version>2.10.1</jodatime.version>
15 </properties>
```

配置 <dependencyManagement> 锁定依赖的版本

```
1 <!--配置dependencyManagement锁定依赖的版本-->
2 <dependencyManagement>
3     <dependencies>
4         <dependency>
5             <groupId>org.springframework.cloud</groupId>
6             <artifactId>spring-cloud-dependencies</artifactId>
7             <version>${cloud.version}</version>
8             <type>pom</type>
9             <scope>import</scope>
10        </dependency>
11
12        <dependency>
13            <groupId>com.alibaba.cloud</groupId>
14            <artifactId>spring-cloud-alibaba-dependencies</artifactId>
15            <version>${alibaba.version}</version>
16            <type>pom</type>
17            <scope>import</scope>
18        </dependency>
19
20        <!--mybatis-plus 持久层-->
21        <dependency>
22            <groupId>com.baomidou</groupId>
23            <artifactId>mybatis-plus-boot-starter</artifactId>
24            <version>${mybatis-plus.version}</version>
25        </dependency>
26
27        <dependency>
28            <groupId>mysql</groupId>
29            <artifactId>mysql-connector-java</artifactId>
30            <version>${mysql.version}</version>
31        </dependency>
32
33        <!--swagger-->
34        <dependency>
35            <groupId>io.springfox</groupId>
36            <artifactId>springfox-swagger2</artifactId>
37            <version>${swagger.version}</version>
38        </dependency>
39        <!--swagger ui-->
40        <dependency>
41            <groupId>io.springfox</groupId>
42            <artifactId>springfox-swagger-ui</artifactId>
43            <version>${swagger.version}</version>
```

```
44     </dependency>
45
46     <dependency>
47         <groupId>io.jsonwebtoken</groupId>
48         <artifactId>jjwt</artifactId>
49         <version>${jwt.version}</version>
50     </dependency>
51
52     <dependency>
53         <groupId>org.apache.httpcomponents</groupId>
54         <artifactId>httpclient</artifactId>
55         <version>${httpclient.version}</version>
56     </dependency>
57
58     <dependency>
59         <groupId>com.alibaba</groupId>
60         <artifactId>fastjson</artifactId>
61         <version>${fastjson.version}</version>
62     </dependency>
63
64     <dependency>
65         <groupId>com.alibaba</groupId>
66         <artifactId>easyexcel</artifactId>
67         <version>${easyexcel.version}</version>
68     </dependency>
69
70     <dependency>
71         <groupId>com.aliyun</groupId>
72         <artifactId>aliyun-java-sdk-core</artifactId>
73         <version>${aliyun.version}</version>
74     </dependency>
75
76     <dependency>
77         <groupId>com.aliyun.oss</groupId>
78         <artifactId>aliyun-sdk-oss</artifactId>
79         <version>${oss.version}</version>
80     </dependency>
81
82     <!-- 日期时间工具 -->
83     <dependency>
84         <groupId>joda-time</groupId>
85         <artifactId>joda-time</artifactId>
86         <version>${jodatetime.version}</version>
```

```
87         </dependency>
88     </dependencies>
89 </dependencyManagement>
```
