

# 一、后台系统路由实现分析

## 1、入口文件中调用路由

src/main.js

```
1 .....  
2 import router from './router' //引入路由模块  
3 .....  
4 new Vue({  
5   el: '#app',  
6   router, //挂载路由  
7   store,  
8   render: h => h(App)  
9 })
```

## 2、路由模块中定义路由

src/router/index.js

```
1 .....  
2 export const constantRouterMap = [  
3   .....  
4 ]  
5  
6 export default new Router({  
7   .....  
8   routes: constantRouterMap  
9 })
```

# 二、医院设置路由定义

## 1、修改路由

修改 src/router/index.js 文件，重新定义constantRouterMap

**注意：**每个路由的name不能相同

```
1 export const constantRouterMap = [  
2   { path: '/login', component: () => import('@views/login/index'), hidden: true },  
3   { path: '/404', component: () => import('@views/404'), hidden: true },  
4  
5   // 首页  
6   {  
7     path: '/',  
8     component: Layout,  
9     redirect: '/dashboard',  
10    name: 'Dashboard',  
11    children: [{  
12      path: 'dashboard',  
13      component: () => import('@views/dashboard/index'),  
14      meta: { title: '预约挂号平台后台管理系统', icon: 'dashboard' }  
15    }]  
16  },  
17  
18  // 医院设置管理  
19  {  
20    path: '/yygh/hospset',  
21    component: Layout,  
22    redirect: '/yygh/hospset/list',  
23    name: 'Teacher',  
24    meta: { title: '医院管理', icon: 'el-icon-s-help' },  
25    children: [  
26      {  
27        path: 'list',  
28        name: 'HospSetList',  
29        component: () => import('@views/yygh/hospset/list'),  
30        meta: { title: '医院设置列表', icon: 'table' }  
31      },  
32  
33      {  
34        path: 'create',  
35        name: 'HospSetCreate',  
36        component: () => import('@views/yygh/hospset/form'),  
37        meta: { title: '添加医院设置', icon: 'tree' }  
38      },  
39    ],  
40  }
```

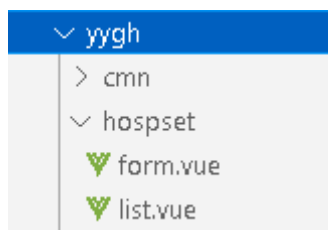

```

41     path: 'edit/:id',
42     name: 'HospSetEdit',
43     component: () => import('@/views/yygh/hospset/form'),
44     meta: { title: '编辑医院设置', noCache: true },
45     hidden: true
46   }
47 ]
48 },
49
50 { path: '*', redirect: '/404', hidden: true }
51 ]

```

### 3、创建vue组件

在src/views文件夹下创建以下文件夹和文件

### 4、form.vue

```

1 <template>
2   <div class="app-container">
3     医院设置表单
4   </div>
5 </template>

```

### 5、list.vue

```

1 <template>
2   <div class="app-container">
3     医院设置列表
4   </div>
5 </template>

```
