

# 一、删除排班

参考《尚医通API接口文档.docx》业务接口4.8删除科室

根据医院编号与排班编号删除科室

## 1、添加service方法和实现

```
1  /**
2      * 删除排班
3      * @param hoscode
4      * @param hosScheduleId
5      */
6  void remove(String hoscode, String hosScheduleId);
7
8  //实现方法
9  @Override
10 public void remove(String hoscode, String hosScheduleId) {
11     Schedule schedule = scheduleRepository.getScheduleByHoscodeAndHosScheduleId(hoscode, hosScheduleId);
12     if(null != schedule) {
13         scheduleRepository.deleteById(schedule.getId());
14     }
15 }
```

## 2、添加 controller

```
1  @ApiOperation(value = "删除排班")
2  @PostMapping("schedule/remove")
3  public Result removeSchedule(HttpServletRequest request) {
4      Map<String, Object> paramMap = HttpRequestHelper.switchMap(request.getParameterMap());
5      //必须参数校验 略
6      String hoscode = (String)paramMap.get("hoscode");
7      //必填
8      String hosScheduleId = (String)paramMap.get("hosScheduleId");
9
10     scheduleService.remove(hoscode, hosScheduleId);
11     return Result.ok();
12 }
```
