

一、用户认证列表

1、用户认证列表接口

用户认证列表接口与用户列表一致，只是默认加了一个认证状态搜索条件：
`authStatus`

2、用户认证列表前端

(1) 添加路由

```
1 {  
2   path: 'userInfo/authList',  
3   name: '认证审批列表',  
4   component: () => import('@/views/user/userInfo/authList'),  
5   meta: { title: '认证审批列表', icon: 'table' }  
6 }
```

(2) 添加用户认证列表页面

添加/views/user/userInfo/authList.vue组件

```
1 <template>  
2   <div class="app-container">  
3     <!-- 查询表单 -->  
4     <el-form :inline="true" class="demo-form-inline">  
5       <el-form-item>  
6         <el-input v-model="searchObj.keyword" placeholder="姓名/手机"/>  
7       </el-form-item>  
8  
9       <el-form-item label="创建时间">  
10        <el-date-picker  
11          v-model="searchObj.createTimeBegin"  
12          type="datetime"  
13          placeholder="选择开始时间"
```

```
14         value-format="yyyy-MM-dd HH:mm:ss"
15         default-time="00:00:00"
16     />
17 </el-form-item>
18 至
19 <el-form-item>
20     <el-date-picker
21         v-model="searchObj.createTimeEnd"
22         type="datetime"
23         placeholder="选择截止时间"
24         value-format="yyyy-MM-dd HH:mm:ss"
25         default-time="00:00:00"
26     />
27 </el-form-item>
28
29     <el-button type="primary" icon="el-icon-search" @click="fetchData()">查询
30     <el-button type="default" @click="resetData()">清空</el-button>
31 </el-form>
32
33 <!-- 列表 -->
34 <el-table
35     v-loading="listLoading"
36     :data="list"
37     stripe
38     style="width: 100%">
39
40     <el-table-column
41         label="序号"
42         width="70"
43         align="center">
44         <template slot-scope="scope">
45             {{ (page - 1) * limit + scope.$index + 1 }}
46         </template>
47     </el-table-column>
48
49     <el-table-column prop="name" label="姓名"/>
50     <el-table-column prop="certificatesType" label="证件类型"/>
51     <el-table-column prop="certificatesNo" label="证件号"/>
52     <el-table-column prop="createTime" label="创建时间"/>
53
54     <el-table-column label="操作" width="250" align="center">
55         <template slot-scope="scope">
56             <router-link :to="'/user/userInfo/show/'+scope.row.id">
```

```
57         <el-button type="primary" size="mini">查看</el-button>
58     </router-link>
59 </template>
60 </el-table-column>
61 </el-table>
62
63 <!-- 分页组件 -->
64 <el-pagination
65     :current-page="page"
66     :total="total"
67     :page-size="limit"
68     :page-sizes="[5, 10, 20, 30, 40, 50, 100]"
69     style="padding: 30px 0; text-align: center;"
70     layout="sizes, prev, pager, next, jumper, ->, total, slot"
71     @current-change="fetchData"
72     @size-change="changeSize"
73 >/>
74 </div>
75 </template>
76 <script>
77 import userInfoApi from '@api/userInfo'
78
79 export default {
80
81 // 定义数据
82 data() {
83     return {
84         listLoading: true, // 数据是否正在加载
85         list: null, // banner列表
86         total: 0, // 数据库中的总记录数
87         page: 1, // 默认页码
88         limit: 10, // 每页记录数
89         searchObj: {
90             authStatus: 1
91         } // 查询表单对象
92     }
93 },
94
95 // 当页面加载时获取数据
96 created() {
97     this.fetchData()
98 },
99
```

```

100 methods: {
101     // 调用api层获取数据库中的数据
102     fetchData(page = 1) {
103         console.log('翻页。。。' + page)
104         // 异步获取远程数据 (ajax)
105         this.page = page
106         userInfoApi.getPageList(this.page, this.limit, this.searchObj).then(
107             response => {
108                 this.list = response.data.pageModel.records
109                 this.total = response.data.pageModel.total
110                 // 数据加载并绑定成功
111                 this.listLoading = false
112             }
113         )
114     },
115
116     // 当页码发生改变的时候
117     changeSize(size) {
118         console.log(size)
119         this.limit = size
120         this.fetchData(1)
121     },
122
123     // 重置查询表单
124     resetData() {
125         console.log('重置查询表单')
126         this.searchObj = {}
127         this.fetchData()
128     }
129 }
130 }
131 </script>

```

二、用户认证审批

1、用户认证审批接口

(1) 添加UserInfoService接口

```

2  * 认证审批
3  * @param userId
4  * @param authStatus 2: 通过 -1: 不通过
5  */
6  void approval(Long userId, Integer authStatus);

```

(2) 添加UserInfoServiceImpl实现

```

1  //认证审批 2通过 -1不通过
2  @Override
3  public void approval(Long userId, Integer authStatus) {
4      if(authStatus.intValue()==2 || authStatus.intValue()==-1) {
5          UserInfo userInfo = baseMapper.selectById(userId);
6          userInfo.setAuthStatus(authStatus);
7          baseMapper.updateById(userInfo);
8      }
9  }

```

(3) 添加UserController方法

```

1  //认证审批
2  @GetMapping("approval/{userId}/{authStatus}")
3  public R approval(@PathVariable Long userId,@PathVariable Integer authStatus) {
4      userInfoService.approval(userId,authStatus);
5      return R.ok();
6  }

```

2、用户认证审批前端

(1) 封装api方法

```

1  //认证审批
2  approval(id, authStatus) {
3      return request({

```

```

4     url: `${api_name}/approval/${id}/${authStatus}`,
5     method: 'get'
6   })
7 }

```

(2) 用户认证列表页面添加审批按钮

```

1 <el-button type="primary" size="mini" @click="approval(scope.row.id, 2)">通过</el-but
2 <el-button type="danger" size="mini" @click="approval(scope.row.id, -1)">不通过</el-b

```

(3) 添加调用方法

```

1 // 审批
2 approval(id, authStatus) {
3   // debugger
4   this.$confirm('确定该操作吗?', '提示', {
5     confirmButtonText: '确定',
6     cancelButtonText: '取消',
7     type: 'warning'
8   }).then(() => { // promise
9     // 点击确定，远程调用ajax
10    return userInfoApi.approval(id, authStatus)
11  }).then((response) => {
12    this.fetchData(this.page)
13    if (response.code) {
14      this.$message({
15        type: 'success',
16        message: '操作成功!'
17      })
18    }
19  })
20 },

```
