一、数据字典导入接口开发

1、创建读取监听器

```java
@Component
public class DictListener extends AnalysisEventListener<DictEeVo> {

    @Autowired
    private DictMapper dictMapper;

    //一行一行读取
    @Override
    public void invoke(DictEeVo dictEeVo, AnalysisContext analysisContext) {
        //调用方法添加数据库
        Dict dict = new Dict();
        BeanUtils.copyProperties(dictEeVo,dict);
        dictMapper.insert(dict);
    }
    @Override
    public void doAfterAllAnalysed(AnalysisContext analysisContext) {

    }
}
```

2、添加controller方法

```java
@ApiOperation(value = "导入")
@PostMapping("importData")
public R importData(MultipartFile file) {
    dictService.importDictData(file);
    return R.ok();
}
```

3、添加service方法

```
1  @Override
2  public void importDictData(MultipartFile file) {
3      try {
4          EasyExcel.read(file.getInputStream(),DictEeVo.class,dictListener).she
5      } catch (IOException e) {
6          e.printStackTrace();
7      }
8  }
```

二、数据字典导入前端

1、在list.vue页面添加导入按钮

```
1  <el-button type="text" @click="importData"><i class="fa fa-plus"/> 导入</el-b
```

2、添加导入弹出层

```
1  <el-dialog title="导入":visible.sync="dialogImportVisible"width="480px">
2      <el-form label-position="right" label-width="170px">
3          <el-form-item label="文件">
4              <el-upload
5                      :multiple="false"
6                      :on-success="onUploadSuccess"
7                      :action="'http://localhost:8202/admin/cmn/dict/importD
8                      class="upload-demo">
9                  <el-button size="small" type="primary">点击上传</el-button>
10                 <div slot="tip" class="el-upload__tip">只能上传xls文件，且不超
11             </el-upload>
12         </el-form-item>
13     </el-form>
14     <div slot="footer" class="dialog-footer">
15         <el-button @click="dialogImportVisible = false">取消</el-button>
16     </div>
17 </el-dialog>
```

3、添加导入弹出层属性

```
1  data() {
2      return {
3          dialogImportVisible: false,
4          list:[] //数据字典列表数组
5      }
6  },
```

4、添加导入方法

```
1  importData() {
2      this.dialogImportVisible = true
3  },
4
5  onUploadSuccess(response, file) {
6      this.$message.info('上传成功')
7      this.dialogImportVisible = false
8      this.getDictList(1)
9  },
```
